Severity: Trivial
Environment: macOS Sierra 10.12, Safari 10.0
Issue: Web-page header is blinking and fill gray color when saving of work results is in process.
Summary: If text extends beyond of workspace, saving process makes with delay. At this moment header has blinking and has a chance to stay filling of grey color.
Steps to reproduce:
- write some text with different letters in line until the text goes beyond the workspace;
- press and hold button "Delete" on keyboard;

Actual result: When saving indicator show "saving" header fill grey.
Expected: Header structure should not change during the working time.
